

Friends of the Helmeted Honeyeater members and friends' day Sunday 27 April 2025 at 2pm
Shields Road, Yellingbo

Maxwell Campbell presents "Biodiversity, Holobionts and Symbiosis – Understanding or Misunderstanding Our Natural World." (This is the sequel but stand-alone presentation to late 2023)

Current President (10 years) of the Field Naturalists Club of Victoria. Maxwell is an experienced naturalist, macro photographer and microscopist with a special interest in video microscopy and is heavily committed to the conservation of biodiversity and ecosystems. His major interest is invertebrates and their symbiotic relationships and the holobionts they form. He has been a biologist, educator and active naturalist for nearly 60 years.

Maxwell will discuss aspects of biodiversity, holobionts and symbiosis and its importance to conservation and regeneration. The critical importance of invertebrates has been grossly under estimated as there is an over-emphasis on vertebrates. He will illustrate his presentation with micro videos and photographs of lesser-known organisms.

Field Naturalists Club of Victoria Inc. (FNCV) is Australia's oldest natural history group, established in 1880. The many special interest groups focus on: Botany, Fauna Survey, Fungi, Geology, Marine Research, Microscopy and Invertebrate Study. There is also a group especially for Juniors.
